SCC550A SANY CRAWLER CRANE 55 TONS LIFTING CAPACITY

QUALITY CHANGES THE WORLD

Main Characteristics

- Page 04 Operator's cab
- Page 05 Upperworks
- Page 06 Lowerworks
- Page 06 Operating Equipment
- Page 07 Safety Device

Main Characteristics

Operating Comfort

Fully-enclosed steel frame structure is adopted, and the front, side, and the top of the cab are installed with large highstrength tampered glass, which admits sufficient light. The operator's cab is bright with ample space, providing wider view and isolates noise in a better way. Multimode and multilevel adjustable suspension seat brings the most comfortable driving experience for the operator. The design of air outlet of air conditioner is more reasonable. Better man-machine interactive interface is realized through integrated 8.4-inch touch screen and programmable key switch. The left console is mounted with swing/auxiliary winch hydraulic-controlled cross handle, control buttons, emergency stop, radio and A/C panel; the right console is mounted with main winch/boom hoist hydraulic-controlled cross handles, as well as ignition and engine throttle button. Walking pedals and walking joysticks are arranged on the front side. The total layout is more human-friendly.

Closed Circuit Monitoring System

The optional camera monitoring system can show the wire rope reeving on each winch, surroundings behind counterweight and environment around the machine.

Engine

- Model: QSB5.9-C210 (Chinese Standard Tier III);
- Rated power: 154kW/2,200rpm;
- Total displacement: 5.9L;
- Max. torgue: 820N.m/1400rpm;
- Starting motor: 24V-6.0kW;
- Accumulator: two 12V battery in serial;
- Fuel tank: 400L.

Electrical Control System

- SYIC-2 integrated control system independently developed by SANY is adopted to ensure high system integration and accurate operation. The control system mainly includes power system, engine system, main control system, LMI system, auxiliary and safety monitoring system.
- Main electrical components are from internationally or industrially well-known brands, which can perform standby in such bad environment as in severe low or high temperature, plateau, and sandstorms.
- The controller, monitor, and the engine communicates through CAN Bus.

Hydraulic System

- Main pump: adopt open piston pump with large displacement, providing oil supply to the main executor;
- Gear pump: dual gear pump for swing, radiator and control circuit;
- Control: the main pump adopts the control type of electrically proportionate positive flow, and the winch motor is piston motor with variable displacement. The operating components are two cross hydraulically-controlled handles, one dual valve for travel pedal to control each executor proportionally.
- Max. pressure of system:

Main load, aux. load, boom/jib winch and travel system: 32MPa Swing system: 20MPa

- Control system: 4.5MPa
- Hydraulic fuel tank capacity: 460L.

Swing Mechanism

- Internal-mesh swing drive can swing the upperworks by 360°.
- Swing lock: Swing lock device is installed. When the operation is over or the machine is in transport, the upperworks can be locked tightly.
- Swing support: single row ball bearing.
- Swing speed: 0~1.9rpm.

05

Main Characteristics

Upperworks

Main and Aux. Load Hoist Mechanism

- Main and aux. hoist winches are driven separately by motor via gearbox. Operating winch handle can control the winch to rotate to two directions, which are lifting and lowering of hook. Excellent inching function is equipped on the machine.
- Drums with fold-line grooves can ensure the wire rope reeved in order in multilayers.

	Drum diameter	520mm
Main Load	Hoist winch rope speed	0~130m/min
Hoist	Wire rope diameter	φ22mm
Mechanism	Wire rope length of main load hoist	180m
	Rated single line pull	7t
	Drum diameter	520mm
Auxiliary	Hoist winch rope speed	0~130m/min
Load Hoist	Wire rope diameter	φ22mm
Mechanism	Wire rope length of aux. load hoist	180m
	Rated single line pull	7t

Boom Hoist Mechanism

- Boom hoist winches are driven separately by motor via gearbox. Operating winch handle can control the winch to rotate to two directions, which are lifting and lowering of boom.
- Drums with fold-line grooves can ensure the wire rope reeved in order in multilayers.

	Drum diameter	290mm
Boom hoist	Working layer rope speed	0 ~ 80m/min
mechanism	Wire rope diameter	φ16mm
	wire rope length of boom hoist	142m

Counterweight

- Counterweight trays and blocks are piled up for easier assembly and transport.
- Total rear counterweight: approximately 16t.
- Rear counterweight: counterweight tray 6.59t × 1, left counterweight block (1) 2.35t × 1, right counterweight block (1) 2.27t × 1, left counterweight block (2) 2.43t × 1, right counterweight block (2) 2.43t × 1.

Lowerworks

Operating Equipment

Independent travel driving units are adopted for each side of the crawler, to realize straight walking and turning driven by travel motor through gearbox and drive wheel

Crawler Extension and Retraction

The crawlers can extend and retract via cylinders. During Work Mode, the crawlers must be extended, and be retracted during transport with crawlers on.

Crawler Tensioning

The jack is used to push the guide wheel and insert the shim to adjust crawler tension.

Track Pad

- " High-strength alloy cast steel track pad can prolong the service life
- They are 760mm wide, and the total amount is 59pcs x 2.

All chords of boom of operating equipment are high-strength steel tubes, and the boom/jib top sheaves are made of highstrength anti-wearing Nylon material protecting wire rope. The hooks are installed with milled welded steel sheave. Pendant cables with quick hitch connector that are easy to assemble are offered as options.

Boom

- Lattice structure. The chord adopts high-strength structural tube and each section is connected through pins.
- Basic boom: 6.5m boom top + 6.5m boom base:
- Boom insert: 3m x 1.6m x 3.9m X 2:
- Boom length: 13m~52m.

Fixed Jib

- Lattice structure. The chord adopts high-strength structural tube and each section is connected through pins.
- Basic boom: 3.05m boom top + 3.05m boom base;
- Boom insert: 3.05m x 3:
- Jib length: 6.1m~15.25m;
- Longest boom + jib: 43m boom + 15.25m jib.

Extension Jib

- The extension jib is a welded structure connected to the boom by pins, used for auxiliary hook.
- Extension jib length: 1.0m.

Hook Block

- 60t hook block, five sheaves.
- 45t hook block, three sheaves.
- 15t hook, one sheave.
- 9t ball hook.

Assembly Mode/Work Mode Switch

- In Assembly Mode, certain safety devices are disabled to facilitate crane assembly.
- In Work Mode, all safety limiting devices activate to protect the operation.

Emergent Stop

In emergency situation, this button is pressed down to cut off the power supply of the whole machine and all actions stop.

Load Moment Indicator (LMI)

- It is an independent computerized safety control system. LMI can automatically detect the load weight, work radius and boom angle, and present on the display the rated load, actual load, work radius and boom angle. In normal operation, the LMU can make a judgment and cut off automatically if the crane moves towards dangerous direction. It can also perform as a black box to record the lifting information.
- It is composed of monitor, angle sensor, force sensor and other parts.

Over-hoist Protection of the Main/Auxiliary Load Hoist

Over-hoist protection device comprises limit switch and weight on boom top, which prevents the hook lifting up too much. When the hook is lifted up to the limit height, the limit switch activates, buzzer on the left control panel sends alarm, failure indicator light starts to flash and the hook hoisting action is cut off automatically.

Over-release Protection Device of the Main/Auxiliary Load Hoist

It is comprised of activator in the drum and proximity switch to prevent over-release of wire rope. When the rope is paid out close to the last three wraps, the proximity switch acts, and the system sends alarm through buzzer and show the alarm on the monitor, automatically cutting off the winch action.

Main Characteristics

Safety Device

Function Lock

If the function lock level is not in work position, all the other handles won't work, which prevents any mis-operation caused by accidental collision.

Boom Hoist Drum Lock

Boom luffing lock switch is designed to lock the boom luffing winch when it doesn't work, so as to prevent mis-operation. Boom hoist winch pawl can automatically respond when the control handle moves; and the pawl locks the drum when the handle returns to neutral position, so that the boom can stay safely when not working.

Swing Lock

Swing Lock can lock the machine.

Boom Limit Device

• When the boom elevation angle reaches the upper limit, the buzzer sounds and boom action is cut off. This protection is twostage control ensured by both LMI system and travel switch.

Back-stop Device

Its major components are nesting tubes and spring, in order to buffer the boom backlash and prevent further tipping back.

Boom Angle Indicator

- Pendulum angle indicator is fixed on the side of boom base close to the cab, so as to provide convenience to the operator. Hook Latch
- The lifting hook is installed with a baffle plate to prevent wire rope from falling off.

Hook Latch

The lifting hook is installed with a baffle plate to prevent wire rope from falling off.

Safety Device

Tri-color Load Indicator

The load indicator light has three colors, green, yellow and red, and the real time load status is presented on the display. When the actual load is smaller than 90% of rated load, the green light is on; when the actual load is larger than 90% and smaller than 100%, the yellow light is on, the alarm light flashes and sends out intermittent sirens; when the actual load reaches 100% of rated load, the red light is on, the alarm light flashes and sends out continuous sirens. At this moment, the system will automatically cut off the crane's dangerous operation.

Alarm Light

When the machine is powered on, the alarm light will work when time comes, so as to warn people around.

Swing Indicator Light

The swing indicator light flashes during traveling or swing.

Illuminating Light

The machine is equipped with short-beam light in front of machine, front angle adjustable far-beam light, lamps in operator's cab, lighting devices for night operation, so as to increase the visibility during work.

Rearview Mirror

It is installed on the left of the operator's cab and at the front handrail of the sheet metal for monitoring the rear part of the machine.

Pharos

Pharos is mounted on the top of boom/jib to indicate the height.

Anemometer

It is mounted on the top of boom/jib, and displayed on the monitor in the cab.

Electronic Level Gauge

It displays the tipping angle of crane on the monitor in real time and sends out alarm to the operator automatically when the angle is out of limit.

Seat Interlock

If the operator leaves the seat, all control handles will be locked immediately to prevent any mis-operation due to accidental collision.

Engine Power Limit Load Adjustment and Stalling Protection

 The controller monitors the engine power to prevent engine getting stuck and stalling.

Engine Status Monitoring

The engine status will be presented, such as engine coolant temperature, fuel volume, total work hours, engine oil pressure, engine speed, battery charging and voltage.

Monitoring System

Remote Monitoring system is a standardized offering to provide functions like GPS locating, GPRS data transfer, machine status inquiry and statistics, operating data monitoring and analysis, and remote diagnosis of failures.

Notes: Rated capacity of crawler crane

①. The rated capacity in the load charts is calculated when the crane is parking on firm and level ground and lifting the load slowly and steadily.

2). The rated capacity values in the load charts are only valid when wind speed is lower than 9.8m/s.
 3). The rated capacity in the load charts includes the weight of lifting hook, etc.; therefore, the actual rated capacity is the value after deducting the weight of

ifting tools (such as lifting hook), from the rated load in the load charts.
 The crawlers must be extended during lifting.

⑤ . The values in the load charts are valid for 360° swing.
